# SunD3 research 2019 september to 2020 march

SunD3 is the only scientifically proven and tested vitamin D in the form of a microemulsion spray.

The main benefits of patented spray LYLmicro™

**guarantees highest bioavailability of vitamin D then other vitamin D intake forms**

(tablets, capsules, drops or other spray forms without microemulsion);

**Passes by the intestinal tract, enters in the bloodstream immediately**

1. Active substances in the composition of the spray and sprayed under the tongue or on the inner side of the cheek.

2. Microdrop-shaped vitamin enters the capillaries of the oral mucosa and into the blood.

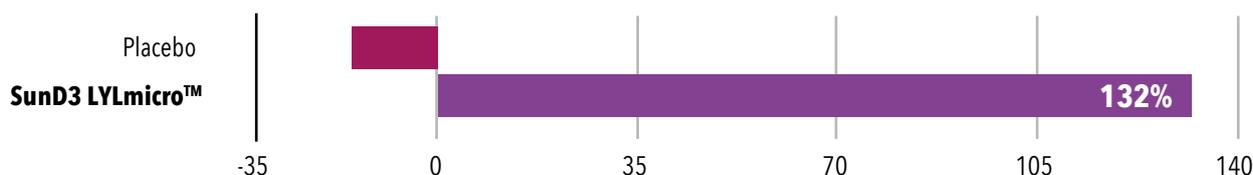

3. Active substance is instantly absorbed with the help of the circulatory system spreads throughout in the body.

4. Gastrointestinal tract is not involved in the process, which often make it difficult to fully absorb the vitamin.

In double blind randomised, placebo-controlled *In Vivo* clinical test, proved SunD3 spray **increased vitamin D levels** in users by an average of 132% from the initial level within 30 days from the start of the test.
